

Et hi fungi sunt, quoad superna, vel	$\left\{ \begin{array}{l} \text{orbiculati} \\ \text{plani} \\ \text{acuminati} \\ \text{laeves;} \\ \text{maculati} \end{array} \right\}$	hique iterum	$\left\{ \begin{array}{l} \text{crassi, in metam surrecti} \\ \text{depressi, sive tenues et terrae incubantes} \end{array} \right\}$
---	--	--------------	---

Ommes isti sunt, quoad substatiam, vel:	$\left\{ \begin{array}{l} \text{flexiles, seu cartilaginosi} \\ \text{lignosi, seu solidi} \\ \text{fasti, seu tomentosi} \\ \text{foliosi} \\ \text{ramosi} \\ \text{muscosi} \\ \text{spongiosi} \\ \text{porosi} \\ \text{membranacei} \\ \text{proliferi} \\ \text{pluribus, communi ortu simul nascentibus} \\ \text{clavati} \\ \text{pulvinati} \end{array} \right\}$
quoad inferna,	$\left\{ \begin{array}{l} \text{redati} \\ \text{radicati} \end{array} \right\}$
quoad colorrem:	$\left\{ \begin{array}{l} \text{flavescentes, sive buxei} \\ \text{albidi} \\ \text{spadicei, sive purpurei} \\ \text{atro - livescentes} \end{array} \right\}$
quoad reliquas qualitates:	$\left\{ \begin{array}{l} \text{odorem suavem spirantes} \\ \text{odore graves, sive foetidi} \\ \text{pulverulenti intus} \\ \text{lacteam et dulcem succum prodentes} \\ \text{exsuccii} \end{array} \right\}$
quoad usum et effectum	$\left\{ \begin{array}{l} \text{esculenti, sive innocui} \\ \text{non esculenti, sive perniciales} \\ \text{letales, ut muscarius} \end{array} \right\}$

dicta: videlicet, quando succus inspissatur in aëre:
evanida fit aura, succus crispatur in muscum.
uliginosi caeli, super cortice ligni aridi fruticans)

nodosus, arborem strangulans.

hanc non veniunt.

MSS. Marsiliani (cod. 1044)
n° VII *Nova Fungorum Collectio*
(pagine preliminari)
